

# BUILDING A CONNECTED SITE

## TOMORROW'S CONSTRUCTION TECHNOLOGY TODAY

Connected construction technology for integrated worksites.

Developed by Trimble. Delivered by SITECH.

A connected site can provide an overview of an entire project from field-to-finish — site managers, plant owners, surveyors and operators can use real-time data to stay on top of design changes, project progress and completion deadlines.

Connected sites enable quick and easy data management that can increase productivity, reduce lead times and make office-to-site communication smoother. So, what are the steps to connecting your site?

1.

### RESEARCH

Contact a technology provider to **ask for a demonstration** to see how the technology can perform for you.

2.

### REFLECT

Weigh up which facets of connected site technology could make the **biggest impact** to operations.

### SUCH AS:

Drones to keep up-to-date with the progress of the project and reach inaccessible or hazardous areas safely

Machine control systems, like the Trimble® Earthworks 3D to avoid lost time and errors, and improve accuracy and productivity

Drone data platforms, like Trimble Stratus, to capture accurate, up-to-date topographic surveys, track progress and inspect work remotely with a visual timeline

Two-way data communication software, such as Trimble WorksManager, to easily manage wireless data transfer and technology assets remotely across project sites

3D model construction software, such as Trimble Business Center, to create accurate, integrated models for survey and construction applications

3.

### DEMONSTRATE

**Understand the benefits** technology has brought to similar companies by reading case studies and industry publications to hear **first-hand and honest opinions**.

4.

### PURCHASE / RENT

**Explore the options** to find the right solution that will fit into your current and future operations. Or **consider renting** equipment to see the impact it has before you invest in your own.

5.

### TRAIN

Connected site technology is **highly intuitive**, but site managers may wish for more in-depth training to ensure they **get the best results** from the equipment.
